Read the passage given below and find the correct choices for questions 1-5 :

Climate change is one of the most pressing issues of our time. Rising temperatures, melting ice caps, and extreme weather events are all symptoms of a larger problem. The main culprit behind climate change is human activity, particularly the burning of fossil fuels such as coal, oil, and gas. The effects of climate change are far-reaching and devastating. Rising sea levels threaten coastal communities and cities, while droughts and heatwaves affect agriculture and food security. Climate change also has serious implications for human health, from heat stress and respiratory problems to the spread of disease. Despite the challenges, there are steps we can take to mitigate the effects of climate change. Transitioning to renewable energy sources, increasing energy efficiency, and protecting natural carbon sinks like forests are all critical. Governments, businesses, and individuals must work together to address this global problem.
